

# **TECHNICAL DATA SHEET**

## **READY TO USE WALLPAPER ADHESIVE**

### **Description:**

Ready To Use Wallpaper Adhesive is suitable for hanging all wallpapers. An easy to use consistency that requires no mixing or dilution. It contains additional PVA for a strong bond and excellent slip properties to assist pattern matching. It also contains efficient fungicides to protect against mould growth.

### **Surface Preparation:**

Surfaces should be sound, dry, clean and free from damp, dust and grease. Remove old Wallcoverings and any loose or flaking paint, then wash down and allow to dry. Any cracks, holes etc should be filled and high spots sanded level. New plaster should be allowed to dry out completely. Very porous or highly alkaline surfaces require a suitable primer. Gloss painted surfaces should be keyed with sandpaper and primed with Primer Sealer and lined using this adhesive. We recommend the use of Fungicidal Wash solution under vinyl wallcoverings, particularly in bathrooms and kitchens.

### **Adhesive Application:**

Apply by either brush or roller. Ensure consistent application of the adhesive, working right out to the edges. Suitable for use with the Wallpaper Pasting Machine.

### **Hanging Instructions:**

It is important that the Wallcovering manufacturer's hanging instructions are followed at all times. If in doubt, seek advice.

### **Coverage:**

Approximately 6-8 m<sup>2</sup>/kg.

### **HEALTH AND SAFETY** - Refer to separate sheet

Note: This is a water-based product and as such the VOC content is minimal, less than 0.4 ppm. The VOC content is derived from residual monomer in the polymer, no additional coalescing solvents are added.

This information supplied is, to the best of knowledge, true and accurate, but any recommendations or suggestions made are without guarantee since the conditions of use are beyond our control.

### **Other Information:**

Addition of VOC information.
